KNOW YOUR BIOPAK PACKAGING SYMBOLS

Disposal

Industrially compostable

Home compostable

Compostable

These symbols identify packaging that is independently certified as either home or industrially compostable. Industrially compostable certified products will disintegrate within 84 days and biodegrade within 180 days in industrial composting conditions. Certified home compostable products will biodegrade within 365 days in home composting conditions. We list the certification standards and our unique certificate number.

Recyclable

This packaging can be recycled through kerbside recycling collection – just make sure it's rinsed clean and free from grease and oil.

Product Materials

Responsibly Sourced Paper and Wood

We only use raw materials from responsibly managed plantations, including FSC™ certified plantations, to ensure our forests are protected forever.

Bioplastic/ Polylactic Acid (PLA)

Our plant-based bioplastic packaging is either home or industrially compostable and has a lower carbon footprint than conventional plastic packaging. It is not recyclable with conventional non-compostable plastics.

Plant Fibre

Our plant fibre packaging is made from reclaimed and rapidly renewable sugarcane pulp – a by-product remaining after the juice has been extracted from the sugarcane refining industry (that would otherwise be burned). Plant fibre packaging can be recycled in the cardboard stream if not contaminated with food.

Conventional Plastic

We're in the process of phasing out all non-compostable plastic items. This type of plastic is well-marked so you can identify whether they're kerbside recyclable – they are **not** compostable.

Product Features

Customisable

Our experienced design team is here to assist with custom branding or bespoke mould sugarcane fibre solutions.

Hot or Cold Use

Our hot food friendly packaging is grease-proof and sturdy, and will retain its structural integrity whilst holding hot food. Our clear bioplastic cups and bowls are cold use only.

Microwave & Oven Friendly

We have noted which packaging is microwave and/or oven safe. Our sugarcane takeaway range can go in the oven at temperatures of up to 220°C for a maximum duration of 20 minutes.

Freezer Friendly

This symbol means the packaging is freezer friendly, however the structural integrity will vary depending on the food contained when frozen and thawed. We can supply samples for you to conduct testing.

WHY CHOOSE BIOPAK?

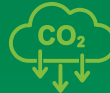

Packaging
Made From
Plants

Responsibly
Sourced &
Manufactured

Certified
Compostable

Emissions
Reduction

Fast
Delivery

We create compostable packaging solutions for a circular economy where there is no waste. It starts with responsibly sourced materials, continues with environmentally certified manufacturing processes, and ends with disposal options that see resources reused or regenerated.

GO CIRCULAR

The traditional economic model is linear and can be simplified as having three basic stages: take, make and waste. BioPak has a commitment to disrupt this outdated model and to invest in a waste-free future – where innovative design and corporate responsibility intersect to create a circular, and regenerative economy.

Plant-Based Raw Materials

Our plant-based products are designed to minimise the impact on our environment at each stage of their life cycle, by using materials that are both sustainably sourced and rapidly renewable. The footprint of these renewable materials is significantly smaller than that of traditional plastics derived from fossil resources – Ingeo™ bioplastic, for instance, has a footprint up to 80% lower.

Plastic-Free
Plant Fibre

Sustainably
Sourced Paper

PLA
Bioplastic

The End is Just the Beginning

Our products are designed to turn into compost – a new, valuable and locally produced resource at the end of their useful life. A thin layer of compost can mitigate climate change by improving the soil's ability to stabilise carbon and by increasing plant growth, which pulls more carbon dioxide out of the atmosphere.

Responsible Supply Chain

Our global standard range complies with ISO environmental standards and corporate social accreditations like Sedex. We also certified our products either home and/or industrially compostable.

Compostable Solution

Did you know that the methane gas emitted from food in landfill is the third largest contributor to climate change? Compostable packaging can help divert food scraps from landfill, avoiding harmful greenhouse gas emissions. Both food waste and compostable packaging can go in the same bin to be turned into nutrient-rich compost. There are a growing number of residential compost collections across the UK.

Find your local composter at Compost Connect today at compostconnect.org/uk/

How Can Your Business Start Composting?

Food and drink residue makes paper and plastic recycling an impractical disposal solution for the foodservice industry, but it's not a problem for composting.

GOOD FOR THE PLANET, GOOD FOR BUSINESS

Compostable packaging isn't just good for the future of the planet, it's good for business, too. At BioPak, we offer quality, sustainable products with unbeatable customer service. Our automated processes and economies of scale mean you will never run out of stock and always receive the best price.

We have worked to create a business that values people, the planet, and profit. As a certified B Corp since 2018, we are committed to meeting the highest standards of social and environmental performance, transparency, and accountability. We give back 5% of our global profits to the community and the environment.

Supporting Positive Change

Compost Connect

To find your local composter, visit government-funded, not-for-profit, compostconnect.org/uk/ proudly supported by BioPak.

“Composting has been surprisingly simple. The team is all really supportive and the customer response has been great, many local customers bring their cups back to put in our composting bins. And better yet – it has actually SAVED us money!”

Saint John Espresso

Give Back Fund

As a profit for purpose business, we are driven to preserve and protect the environment and give back to the communities we live in. That is why we donate 5% of our global profits to positive change via charity partners.

We are passionate about the environment, both social and ecological. We support Ecologi, and together with our customers we have planted 99,078 trees since the start of 2021. We also support charity organisations like Worcester Food Bank and Maggs Day Centre for the homeless, to help support the local community and those most in need.

HOME COMPOSTABLE SOLUTION

Home Compostable
(NF T51-800) Aqueous
Coated BioCups with
Home compostable (NF
T51-800) Plant Fibre lids.

The Future of Cups

BioPak is more than just a compostable packaging company. We envision a future in which materials are made from sustainably sourced, rapidly renewable biological resources, and recycled back into the soil. As the world focuses on developing a more sustainable circular economy and governments align policies to address plastic pollution, we must remain vigilant and ensure that new materials do not have unintended environmental and human health consequences.

Aqueous is a new unique cup coating technology that uses a unique waterproof barrier coating. These revolutionary dispersion paper cups will be certified home compostable to European Standards NF T51-800 in March 2023, meaning they can be turned into nutrient-rich soil in a home

compost – a sustainable solution that doesn't compromise on quality, making it the perfect choice for eco-conscious consumers who care about our planet.

Together with our plant fibre lids, you can now offer your customers a completely home-compostable cup solution! We will be upgrading all of our existing BioCups ranges to feature the new aqueous lining, watch this space!

SINGLE USE PLASTIC BAN UK

WHAT PRODUCTS CAN YOU USE?

BioPak supports single-use plastic bans and offers sustainable approved alternatives for all banned items. Alternatives include FSC™ wood and paper products, plant-based packaging and home compostable Aqueous lined products.

The following information reflects all bans regulated as of August 2023. More detail available at www.biopak.com/uk/single-use-plastic-bans

*Exemptions in each region allow the supply and use of some banned single-use plastic items for specific circumstances.

* Please ensure compliance with the bans by using only certified compostable items (Home Standard NF T51-800 or Industrial Standard EN13432) in regions where they are accepted as the only alternative to banned plastic items.

✘ Already Banned

	Sugarcane Pulp Un-Lined			
 TRAYS	EPS trays	Banned from Oct 2023		
	Paper lined with Plastic	Restricted by Use See exemptions		
	Sugarcane Pulp Un-lined			

You can still supply single-use plastic plates, bowls and trays if either of the following apply:

- You are supplying them to another business
- The items are packaging (pre-filled or filled at the point of sale)

Some examples of packaging are:

- Takeaway
- Delivered food
- Bowls filled at the point of sale
- Food sold in retail

Sectors that are not exempt include, but are not limited to:

- Office canteens where food is consumed on site
- Retailers who sell these items to consumers eg a pack of plastic plates sold for a family picnic

the above are guidelines and may vary depending on your specific use case. The full details can be found here <https://www.gov.uk/guidance/single-use-plastics-ban-plates-bowls-trays-containers-cutlery-and-balloon-sticks>
